

**DID YOU KNOW THAT...**

Kentucky's rockshelters and caves hold the proof of North America's Eastern Woodlands as a center of plant domestication, just like Mexico, Peru, China, and the Middle East.

Long before Kentucky's native peoples turned to farming maize and beans from Mexico, their ancestors grew domesticated native plants, including sunflower, in gardens.

The oldest seeds of domesticated goosefoot in the eastern United States – dated to 1500 BC – come from rockshelter sites in Menifee County.
